# Introduction

This tinderbox file supports creating a book and manuscript (beta) with [Quarto](#).

[Tinderbox file for Quarto \(Web version\)](#)

You can easily make qmd files and `_quarto.yml` with it. Here is an example of books created with Quarto.

- [R for Data Science \(2e\)](#)(Wickham and Grolemund (2016))

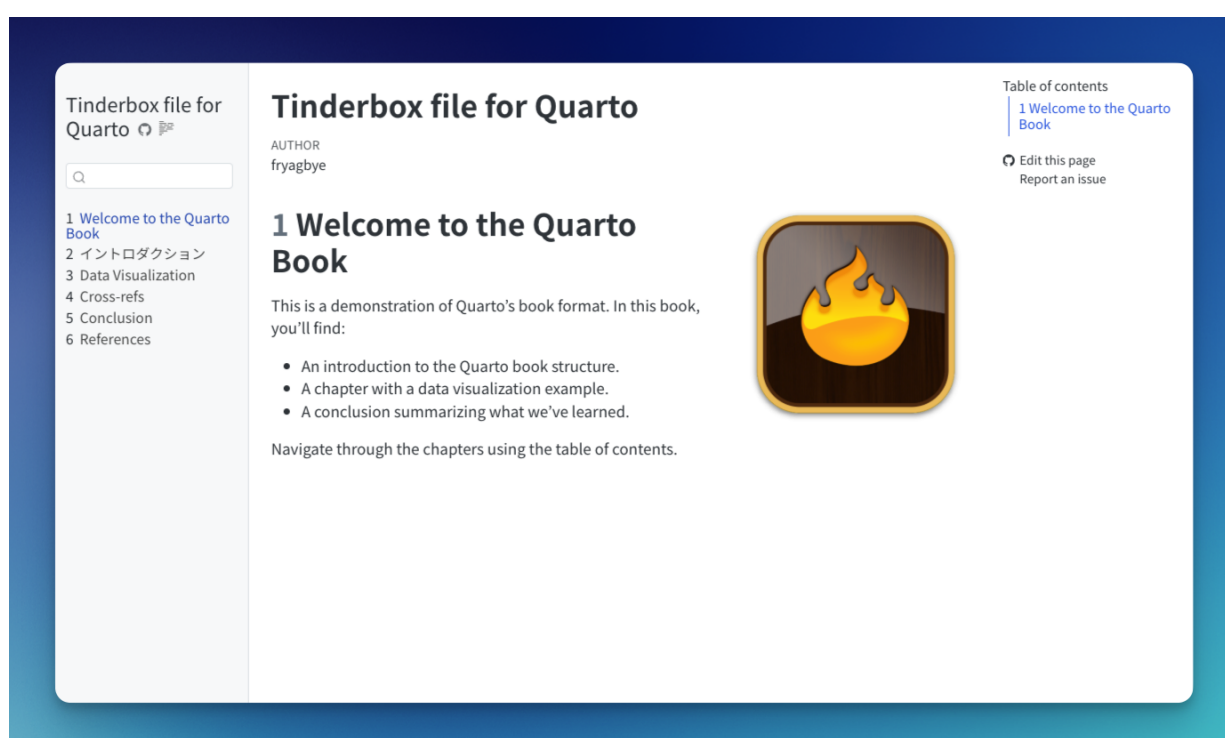

Figure1: Tinderbox with Quarto part1

My Workflow is [Figure 2](#) and [Figure 3](#).

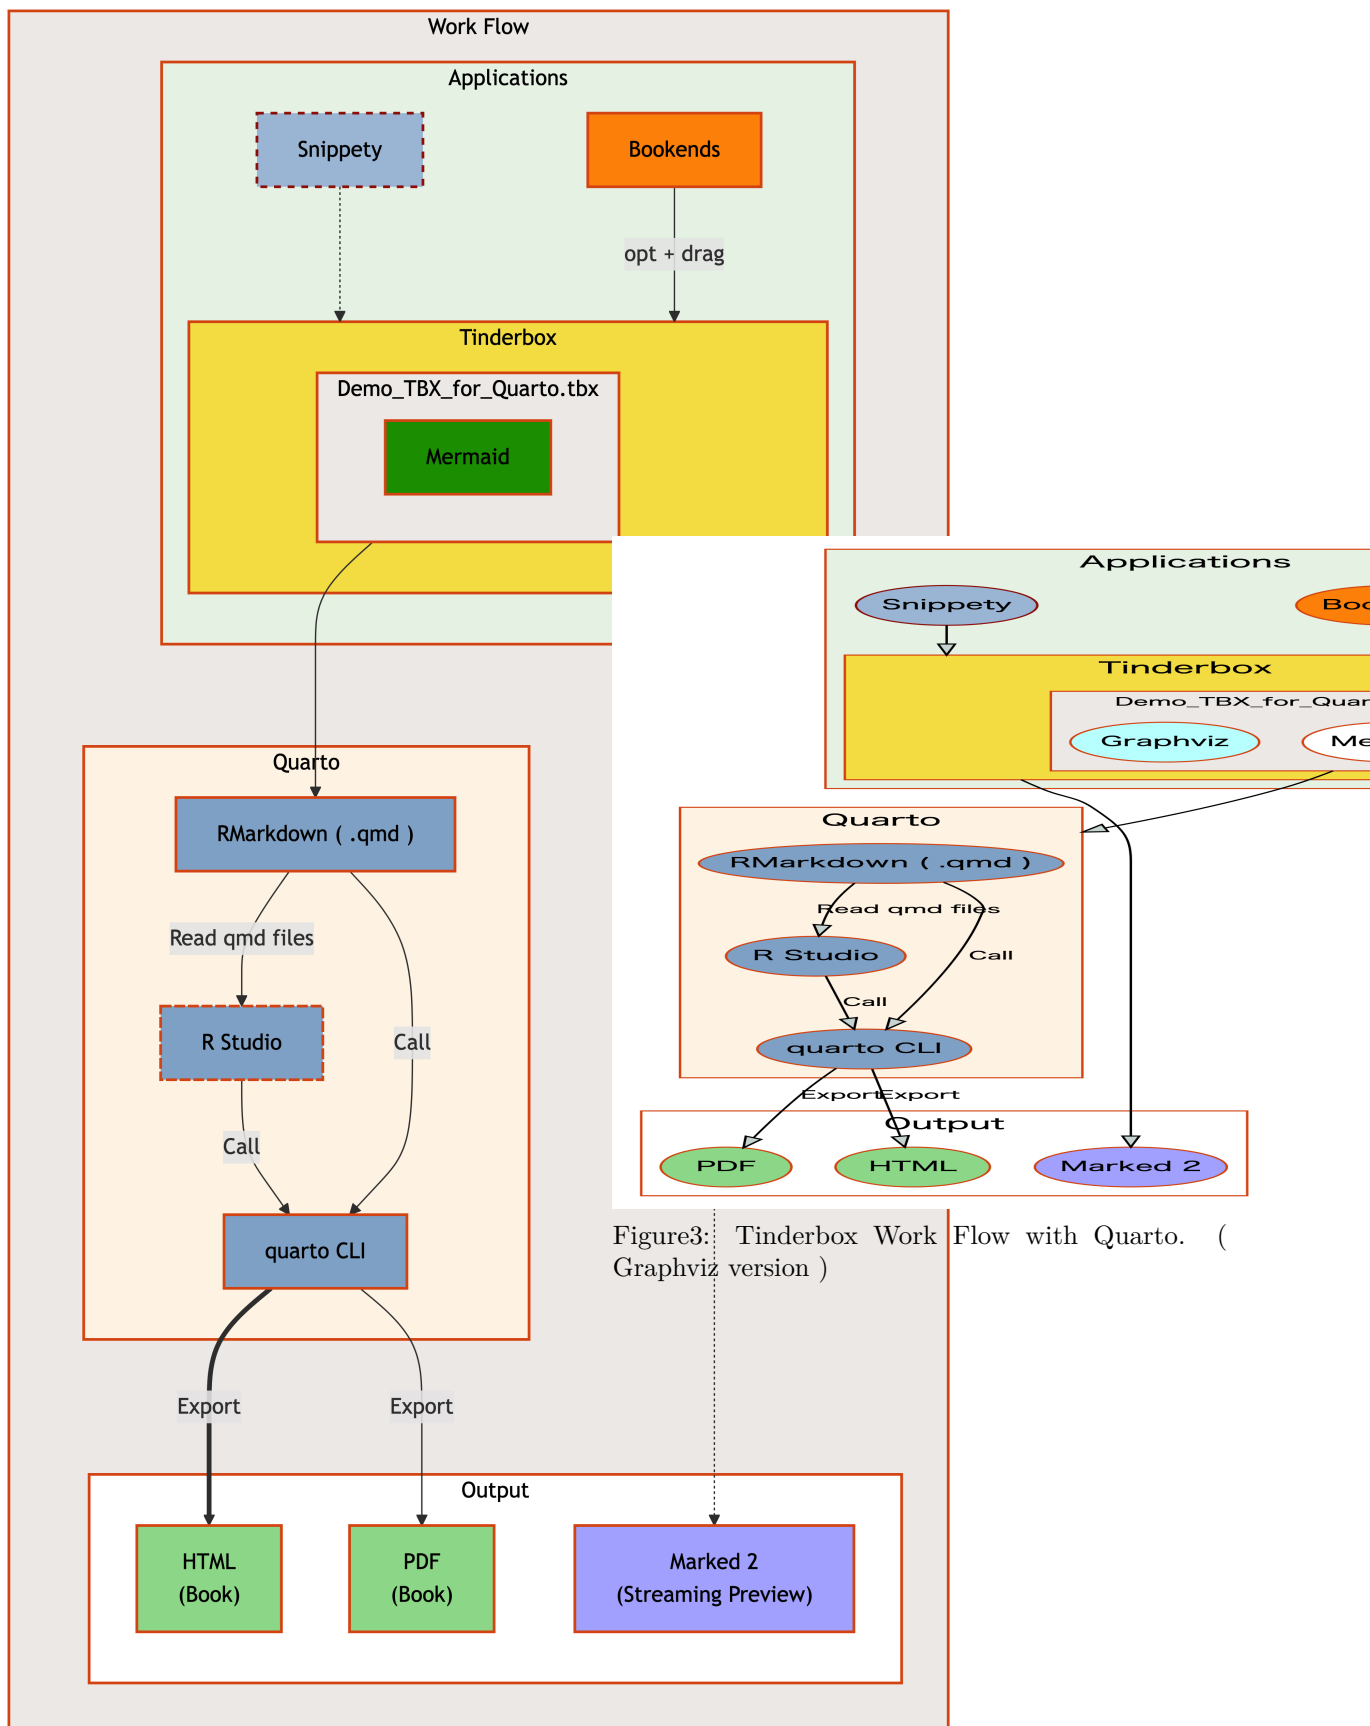

Figure2: Tinderbox Work Flow with Quarto ( Mermaid version ).

## Chapter 1

# Usage environment

Please refer to the output results of `quarto check`.

- Quarto is using the released version 1.7.13 (pre-release)<sup>\*1</sup>.
- R is version 4.4.2.
- I use luaLatex for output in Japanese. I have installed MacTex because TinyTex doesn't include it.
- It may be better to uninstall TinyTex.
- I have set it to use the `lightbox` extension ( included in Quarto v1.4+.)

`quarto check` output

```
# Quarto check output
Quarto 1.5.57
[✓] Checking versions of quarto binary dependencies...
  Pandoc version 3.2.0: OK
  Dart Sass version 1.70.0: OK
  Deno version 1.41.0: OK
  Typst version 0.11.0: OK
[✓] Checking versions of quarto dependencies.....OK
[✓] Checking Quarto installation.....OK
  Version: 1.5.57
  Path: /Applications/quarto/bin

[✓] Checking tools.....OK
  TinyTeX: (not installed)

## Chapter 2

# Setting

### 1. Setting up with “TBXConfig” note

You need to change the values of the following “TBXConfig” attributes for configuration.

- `$Indent_Character` -> Set the symbol representing the depth of indentation. ( default value = ★ )
- `$ExList` -> List of notes excluded from cross-reference search ( default value = “List and Agent etc” )
- `$ExportFolder` -> Path of exported files. ( for Stamp “Move qmd files” )
- `$ToggleTOC` -> Toggle for Generating TOC. ( default value = false ) You can use quarto option for TOC in `_quarto.yml`.
- `$Q_TableOfContentsNote` -> **\$Name** of TOC note. ( default value = Table of Contents )
- `$Rename_in` -> Setting for translating a label. ( default value = ja:en )
- `$Q_PDFEngine` -> Setting for [pdf engine](#) This file is tested only with lualatex. ( default value = lualatex )
- ~~`$OutlineBaseControl` -> Adjustment of section levels in Markdown. ( default = 1 )~~  
 e.g.
  - `$OutlineBaseControl = 1` -> `## Title`
  - `$OutlineBaseControl = 1` -> `# Title`

\*`$RScriptLibraryPath` -> R Library Resource Path ( default Value

### 2. Making a `_quarto.yml`

You can change the values of attributes of the “\_quarto” note to change quarto options. The quarto options are attributes that start with “Q” in this file. The initial setting specified in `_quarto.yml` is for Japanese output. Please refer to [Quarto Book Structure](#) and [PDF Basics](#) in detail.

If you use [Custom Translations](#), you need to make `$Q_Has_Language_YML` true and set `$Q_Language_YML` for the filename. The “\_language” note in this file is for translating to Japanese.

### 3. Changing the `_common.R` file. ( optional )

You can set up knitr package options for R chunk.

Part I

Book format

## Chapter 3

# Make notes

1. Make notes with Prototype pNote and pSubnote  
 pNote is for Sections and pSubnote is for Subsections. Please set the Prototype of pNote to level 1 and pSubnote below level.
  - When creating a note, please enter “#pNote” or “#pSubnote” following the title. (or apply the pNote Prototype or pSubnote to notes you make )  
 e.g. Note title -> わが輩は猫である #pSubnote
    - The note title (\$Name) is the header for pNote or pSubnote.
  - Depending on the hierarchy level, the level of the header also changes.  
 e.g. If the title of pSubnote in level 2 depth is “わが輩は猫である”, it will be output as follows when exporting.  
 ## わが輩は猫である
2. Index.qmd  
 In the quarto book format, **only one index.qmd is required**, \$IsIndexqmd of the index.qmd is set to **true**. You can make the note for index.qmd with the pIndexQmd Prototype.

## 3.1 Special Notes Prototype

1. pReferenceQmd  
 This prototype is inherited from pNote and \$Text has a div with id **refs** to call a works cited list (below). ([Quarto Bibliography Generation](#))  
 ::: {#refs}  
 :::
2. pAppendixQmd  
 This prototype is inherited from pNote and \$IsAppendix is **true**.

## Chapter 4

# Rename HTMLExportFileName of a note with translation

There is a stamp “**Notes: Tranlate Section Labels**” that translates the Japanese title (**\$Name**) into English and automatically sets **\$HTMLExportFileName** <sup>\*1</sup>. and you can set **\$SectionLabel** with stamp “Set: Section Label”. The labels of the section cannot be duplicated, so please modify them manually if necessary. In addition, you can change the language to be translated with **\$Rename\_in** in the TBX configuration note (**TBXConfig**). ( By default, from Japanese to English).

---

\*1 [Translate-shell](#) installation required.

```
>brew install translate-shell
```

## Chapter 5

# Part in Book format

For Part, please refer to [Quarto’s “Book Structure” reference](#).

pNote is compatible with quarto’s **Part** or **Chapter**.

If pNote is at the bottom of pNote, the top pNote will be Part (Part ○), and the lower pNote will be Chapter (Chapter ○). You can place pNote at hierarchical level 2 only if you are under pNote of hierarchy level 1.

In this case, the hierarchy level and header level are different, so the header level is set based on the user attribute `$OutlineDepthBase`.

pNote, which is treated as a Part, is turned on (`true`) for `$Is_Part_qmd`. The lower pNote contains the export file name (e.g. filename.qmd) of the pNote, which is Part, in `$Part_file`.

If a Part note is empty, only the title (`$Name`) of the note is reflected in `__quarto.yml`, as shown in the “Dice” in the example below. If the dice.qmd is not empty, the part title (as a level one header) as well as some introductory content for the part.

```
#_quarto.yml
chapters:
- index.qmd
- preface.qmd
- part: "Dice" # if $Text("Dice").wordCount == 0
chapters:
- basics.qmd
- packages.qmd
```

```
#_quarto.yml
chapters:
- index.qmd
- preface.qmd
- part: dice.qmd # if $Text("Dice").wordCount >0
chapters:
- basics.qmd
- packages.qmd
```

The figure below shows the export example when Part is supported and the output result of `__quarto.yml`.

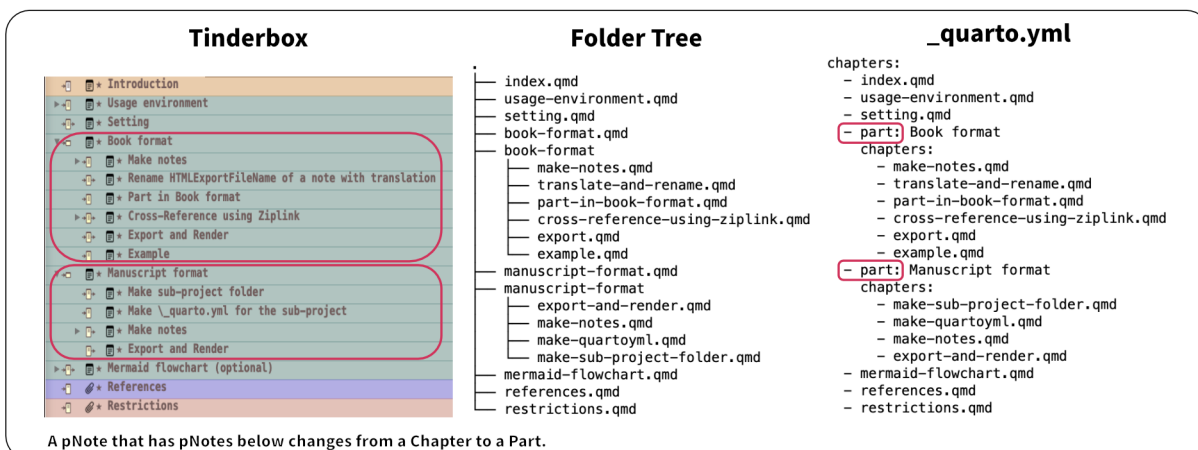

Figure 5.1: Folder configuration at the time of output and \_quarto.yml

## Chapter 6

# Cross-Reference using Ziplink

In Quarto, labeled diagrams, tables, etc. can be mutually quoted. Automatically (or manually) collect some labels in the **Tinderbox** file at the bottom of the **Reference List** note.<sup>\*1</sup>

Convert it to a quotable title (citation name starting with @) and create a note for the corresponding part. **Tinderbox**'s **Ziplink** function<sup>\*2</sup> is a function for easily pasting links to notebooks. It is diverted to make it easy to enter the quoted name. This makes it relatively easy to find and enter the quoted label even if the number increases.

### 6.1 How to set the label of the diagram

#### 6.1.1 R chunk

Automatically recognize and collect R chunk labels in the following format (`#| label: fig-xxx-ooo, etc.`). The method of specifying a label in the curly bracket (`{r fig-xxx-ooo}`) is not supported. In the following example, you can quote **@fig-airquality**.

```
#| label: fig-airquality
#| fig-cap: "Temperature and ozone level."
#| warning: false

library(ggplot2)

ggplot(airquality, aes(Temp, Ozone)) +
  geom_point() +
  geom_smooth(method = "loess")
```

---

\*1 The diagrams and tables are extracted in regular expressions.

\*2 Please refer to “Text link creation via the Ziplinking method” in [A Tinderbox Reference File](#).(Anderson (2024))

Figure6.1: label: @fig-airquality

### 6.1.2 Image link in markdown format

Recognize and collect labels in a format that extends the markdown.

```
![Test image](screenshots/toolbar.png){#fig-test fig-alt="test" fig-align="left" width=100%}
```

Figure6.2: label:Figure 6.2

## 6.2 How to set the label of the table

There are multiple ways to specify labels, but they are only supported if it is a table in markdown format and the label name is above, as shown in the example below.\*<sup>3</sup>

```
: 明度・彩度の修飾子 {#tbl-brightness-saturation}
```

```
| 項目 | 効果 |
| ---- | ----- |
| dark | 暗くする |
```

\*<sup>3</sup> For other formats, please refer to [quarto cross-reference](#).

```
|darker|より暗くする|
|darkest|最も暗くする|
|light|明るくする|
```

Table6.1: 明度・彩度の修飾子

項目	効果
dark	暗くする
darker	より暗くする
darkest	最も暗くする
light	明るくする

## 6.3 Equations

Equation Example

Black-Scholes (Equation 6.1) is a mathematical model that seeks to explain

$$ma^2S^2\frac{\partial^2C}{\partial S^2} + rS\frac{\partial C}{\partial S} = rC \quad (6.1)$$

```
$$
```

```
\frac{\partial \mathrm{C}}{\partial \mathrm{t}} + \frac{1}{2}\sigma^2 \mathrm{S}^2
\frac{\partial^2 \mathrm{C}}{\partial \mathrm{S}^2} + \mathrm{r} \mathrm{S} \frac{\partial \mathrm{C}}{\partial \mathrm{S}} = \mathrm{r} \mathrm{C}
$$ {#eq-black-scholes}
```

## 6.4 How to quote

If you enter two square brackets “[[”, the list will be displayed, so please enter a part of the label name. As the candidates are narrowed down, select the citation label you want to enter.

Types of quotations	Lable	Quote
Chapters, Sections etc.	#sec-	@sec-
Figures	#fig- #  label:fig-%%  label:fig- /// label:fig-	@fig-
Charts	#tbl-	@tbl-
Equations	#eq-	@eq-

## 6.5 Restrictions on quoted labels

- The label before change or deletion remains because it cannot be detected even if the quoted label name is changed or deleted.
- Cross-ref detection is carried out by regular expression. If it is executed in the middle of input, it will be duplicated with a short label.

In this case, if necessary, delete the quoted label name in Stamp and perform the detection manually by following the steps below.

1. Labels: Clear Cross-Reference List (Delete all citation labels under the Reference List.)
2. Labels: Make Cross-Reference List (Re-detect the quoted label.)

## 6.6 Dummy links for cross-reference

You can create dummy links showing where each cross-reference, starting with the @ symbol in the section, figure, and table label lists, is cited.

1. execute the “Labels: Make Dummy Link Data For Cross-Reference” stamp
2. select cross-ref label notes ( start with “@” ) and execute the “Labels: Dummy Link between Reference and Selected notes” stamp.

## Chapter 7

# Export and Render

### 1. Export `_quarto.yml`

You can change the output format to “pdf” or “html” with the stamp “Change quarto.yml template”. If you use a `_language.yml`, you export “`_language`” note (optional. See Chapter 2 Setting)

### 2. Export `.qmd` files ( pNote notes only)

The pSubnote at the bottom of pNote at the time of output is all output as one qmd file in the state contained when pNote is exported. Therefore, it is OK to export by selecting only pNote to output. In addition, pSubnote does not require output, but if you export, it is set to output as a text file (extension `.txt`).

If you select the pNote notes below “For Export” and output it ( Figure 7.1a ), then execute the “Move qmd files” stamp, you can move (or overwrite) the qmd file directly to the export(project) folder ( Figure 7.1b ). This is a method to avoid having to consider the folder structure when referencing image files with a relative path.

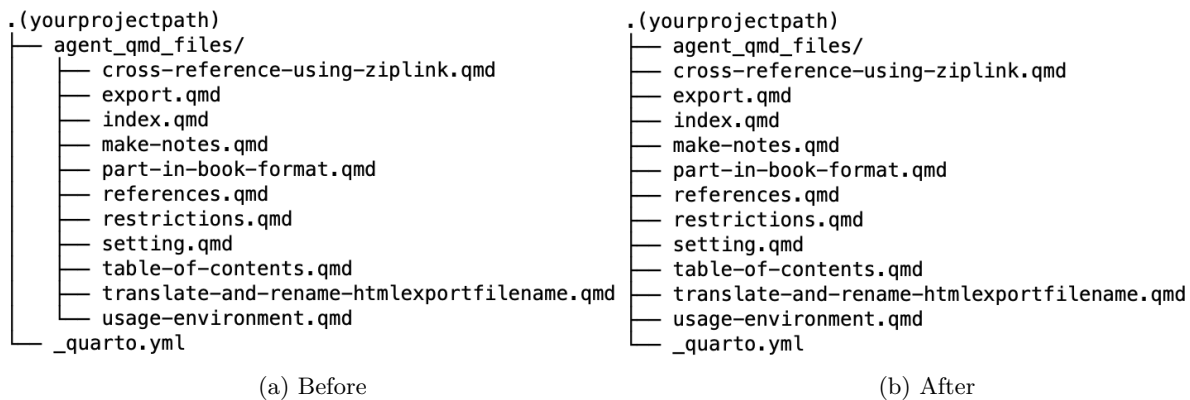

Figure7.1: qmd files are moved to the project path by stamp

### 3. Preview HTML output. ( optional )

```
# preview for only html output
> quarto preview index.qmd --to html --no-watch-inputs --no-browse
```

### 4. Render pdf or html.

```
> quarto render
```

You can use RStudio for preview and render.

## Chapter 8

# Example

[Example PDF](#)

## Part II

# Manuscript format

## Chapter 9

# Make sub-project folder

Make a note for the sub-project with **pSubfolderManuscript** like this ( `__quarto__manuscript` ).

### 9.1 Make notes

The manuscript has only one qmd file. The qmd file name is set in `__quarto.yml` (`__quarto__manuscript`).

#### 9.1.1 Front Matter and Subnote

1. pFrontmatterManuscript

This is a qmd file that contains a Front Matter. When you export, it has contents of descendants. You can set data for author(s) with the path of note with pAuther notes. ( like Authors )

```
$IsManuscript = true
```

2. pSubnoteManuscript

This is a dummy file for pFrontmatterManuscript. The markdown level depends on the indent level and `$OutlineBaseControl` of of the subproject folder.

```
"#" * $OutlineDepthBase + $OutlineBaseControl(collect(ancestors,$Path)[-1]))
```

```
$IsManuscript = true
```

## Chapter 10

# Export and Render

1. Export You have to export `__quarto.yml` ( `__quarto__manuscript` ) and one `qmd` ( `main` ) in the sub-project folder.
2. Activate a virtual environment if you use a virtual environment, activate it.

e.g.

```
poetry shell
```

3. Render sub-project

```
# quarto render "your project name"
quarto render myproject

# For preview
quarto preview myproject --to html --no-watch-inputs --no-browse
```

Part III

revealjs format

## Chapter 11

# Make sub-project folder

Make a note for the sub-project with **pSubfolderRevealjs** .

### 11.1 Front Matter and Subnote

1. pFrontmatterRevealjs

This is a qmd file that contains a Front Matter. When you export, it has descendants' contents.

```
$IsRevealjs = true
```

2. pSubnoteRevealjs

This is a dummy file for pFrontmatterRevealjs. The markdown level depends on the indent level and \$OutlineBaseControl of the subproject folder.

```
"#" * $OutlineDepthBase + $OutlineBaseControl(collect(ancestors,$Path)[-1]))
```

```
$IsRevealjs = true
```

3. Quote chunk code blocks

You can chunk code blocks with a quote tag like the one below from a child note (pRChunk or pPChunk).

### 11.2 quarto-live extention (β version)

This file supports [quarto-live](#). You add the quarto-live extension to your subproject path. (If you add it to the project folder and call it with a relative path, an error will occur.)

## Chapter 12

# Mermaid flowchart (optional)

This file can generate Mermaid flowchart from notes, links.

- Container notes -> Subgraphs ( pMFSubgraph )
- Non Container notes -> Nodes ( pMFNode )

Work Flow is a sample of Mermaid flowchart.

Please check it in Map view.

You need to use pre-release version <sup>\*1</sup>

### 12.1 How to use

1. You make a container note for Flowchart and set pMFContainer.
2. You make notes ( pMFNode ) and links.
3. You choose a direction for drawing like TD or LR.(\$M\_\_Direction)
4. Run the stamp ( **Mermaid: Make a Flowchart** ).
5. Prototypes of container notes **has** a child note change from pMFNode to pMFContainer automatically by the stamp.
6. The note (pMFContainer) has the code for mermaid flowchart.

---

<sup>\*1</sup> Since the old headless mode has been removed from Chrome 132, Quarto v1.7.13 or later is required. ([Transition to Chrome new headless mode](#) · [Issue #10532](#) · [quarto-dev/quarto-cli](#))

## 12.2 Supported shapes

- rectangle (<- normal and other shapes)
- rounded
- oval
- lozenge
- diamond
- hex

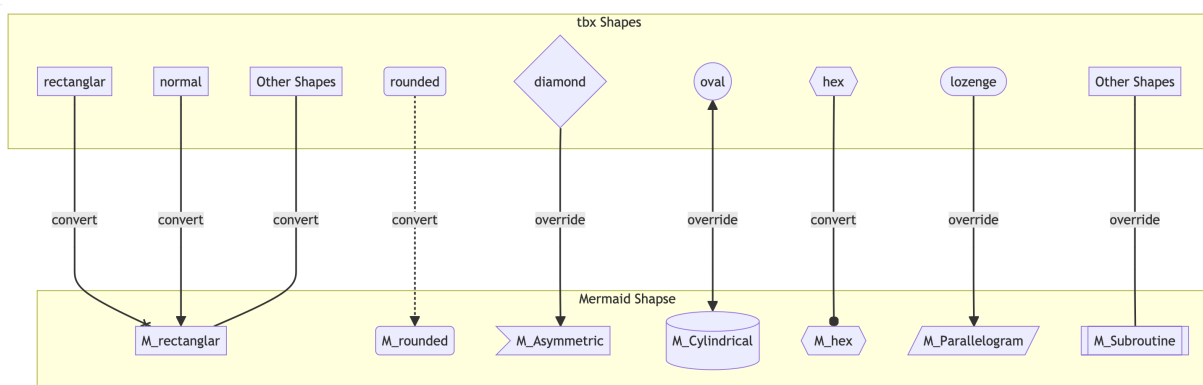

Figure12.2: Convert shapes

## 12.3 Supported line types (Priority)

- normal -> (4th)
- bold ==> (3rd)

- dotted  $\dot{-}>$  (2nd)
- invisible  $\sim$  (1st)

## 12.4 Supported arrow types

- arrow only

## 12.5 Example

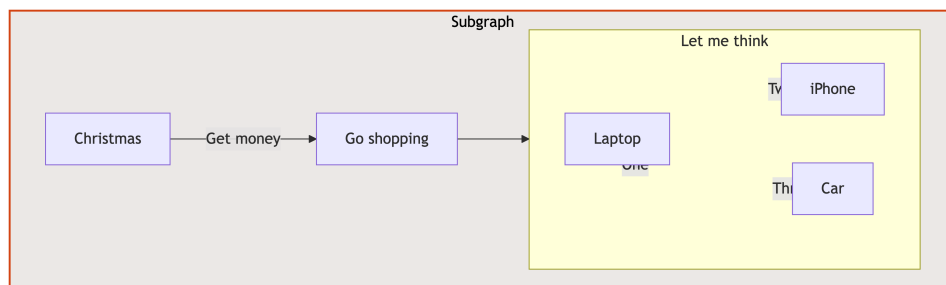

Figure12.3

## Chapter 13

# Graphviz $\beta$ version (optional)

### 13.1 How to use

1. You make a container note for the graph and set pGContainer.
2. You make notes ( pGNode) and links. **You can't make links to cluster (subgraph).**
3. You choose a direction for drawing like TB or LR. (\$GG\_Rankdir)
4. You can choose a Layout Engin like dot, neato, fdp and so on.
5. Change attributes for Graphviz.
  - Attributes starting with GG\_ are for the Subgraph ( cluster ) options
  - Attributes starting with GN\_ are for the Note options
  - Attributes starting with GE\_ are for the Edge options
6. Run the stamp ( Graphviz: Make a Dot graph ).
7. Prototypes of container notes **have** a child note change from pGNode to pGContainer automatically by the stamp.
8. The note (pGContainer) has the code for Graphviz.

## Restrictions

It seems that the section label customization function cannot be used in the latest release [ref. Cross-references on unnumbered pages fail \(PDF\) or are mislabeled \(HTML\)](#).

If you turn on `$IsUnnumbered` and `$HasSectionLabel`, the display of the quote will be fixed to the number + title, so please turn off `$IsUnnumbered`.

Please do not use parentheses in note titles. The section label list is not being generated correctly.
